

David M. Darmon

Curriculum Vitae

400 Cedar Avenue
West Long Branch, NJ 07764
☎ (610) 209 3669
✉ ddarmon@monmouth.edu

Research Interests

Statistical inference for complex systems, information-theoretic analysis of complex systems, information dynamics in biological and neural systems, machine learning, data science, network science.

Appointments

2018–Present **Assistant Professor of Mathematics**, MONMOUTH UNIVERSITY.

Education

- 2013–2015 **Ph.D.**, *University of Maryland*, College Park.
Applied Mathematics, Statistics, and Scientific Computation (AMSC)
Advisors: Michelle Girvan (Physics) and William Rand (Marketing)
- 2010–2013 **M.S.**, *University of Maryland*, College Park.
Applied Mathematics, Statistics, and Scientific Computation
- 2006–2010 **B.S.**, *Ursinus College*, Collegeville.
Major: Mathematics, Minors: Chemistry and Physics

Research Experience

- Summer 2015 **Research Scientist**, UNIFORMED SERVICES UNIVERSITY, Bethesda.
– Worked in a research program advancing analytical tools for the determination of physiological prodromes of psychological disorders with a focus on traumatic brain injury. Developing statistically principled information theoretic methods for extracting relevant features from electrocardiogram (ECG), electroencephalogram (EEG), and magnetoencephalogram (MEG) data sets, with an emphasis on their application to temporal networks.
- Summer 2018
- Fall 2012 **Research Assistant**, UNIVERSITY OF MARYLAND, College Park.
– Interacted with research teams within the Physics department and the Center for Complexity in Business in the Robert H. Smith School of Business. Pursued research related to modeling individual and collective behavior of humans in digital environments. Lead large-scale data collection efforts to provide empirical support during the model building process.
- Summer 2015
- Summer 2012 **Intern**, UNIFORMED SERVICES UNIVERSITY, Bethesda.
Designed a methodology for discrimination between mentally healthy and unhealthy service men and women based on psychophysiological, neurological, and demographic assessments of the individuals. This system used a random forest classifier to incorporate categorical and numerical covariates, and allowed for straightforward answers to scientific questions. The classifier will be incorporated into a diagnostic system currently under development.

- Summer 2011 **Intern**, UNIFORMED SERVICES UNIVERSITY, Bethesda.
Constructed statistical tools for analyzing reaction time data from returning service men and women. The goal of the summers project was to identify chronometric 'invariants' across psychologically healthy individuals that changed in individuals suffering from post-traumatic stress disorder or traumatic brain injury.
- Summer 2010 **Intern**, OAK RIDGE NATIONAL LABORATORY, Oak Ridge.
Developed a methodology for detecting anomalous behavior across the network perimeter of Oak Ridge National Laboratory. The method incorporated a Latent Dirichlet Allocation model to capture typical behavior of a given IP address, and found that a small number of behaviors capture most of the profiles present in the data.

Teaching Experience

- Fall 2018 **Monmouth University**.
–
 - Computation and Statistics
- Present
 - Regression and Time Series Analysis
 - Probability Methods for Actuarial Science
 - Probability and Statistics I
 - Statistics with Applications
 - Pre-Calculus Modeling for the Biological Sciences
- July 2017 **Workshop Organizer**, SANTA FE INSTITUTE.
Developed, organized, and facilitated the hands-on activities for the Santa Fe Institute's Short Course on Networks and Big Data held in New York City in July 2017. Topics included network analysis from the ground up, agent-based modeling, and visualization of complex networks.
- Fall 2010 **Teaching Assistant**, UNIVERSITY OF MARYLAND, College Park.
– Lead recitation sections in differential equations, multivariable calculus, intermediate statistics, and linear algebra.
- Fall 2012

Summer Schools

- Summer 2013 **2013 Complex Systems Summer School**, SANTA FE INSTITUTE.
Lead a project group consisting of eight researchers from a diverse set of backgrounds in an investigation of the quantification of synchrony in dynamics occurring on networks. This work culminated in "Detecting Communities Using Information Flow in Social Networks" in the 2013 Complex Systems Summer School Proceedings and "Followers Are Not Enough: A Multifaceted Approach to Community Detection in Online Social Networks" in PLOS ONE.
